In India, while most children are enrolled in schools, the quality of education is far from satisfactory and there is a high drop out before they complete 8 years of schooling. In this presentation, the speaker will talk about AID TN's efforts in Tamil Nadu to make science and math meaningful for children through experiments, activities, and puzzles. He will also describe how AID works with a large number of government schools to achieve this goal, their approach of training people from poorer sections to work with teachers and children, and the problems and challenges when doing so.
